

Arapahoe County Diverts the Mentally Ill for Treatment (ADMIT) Program

The ADMIT program continues to foster and develop new community relationship to create a network of resources available to ADMIT clients. The program served 56 clients during the reporting period. Of the 56 clients served during this reporting period, 22 (40 percent) successfully graduated, 4 (7 percent) completed, and an additional 17 (30 percent) remains enrolled. However, (21 percent) were revoked and 1 (2 percent) passed away as the result of an auto accident.

The ability of clients to obtain/retain affordable housing and meaningful employment is a major challenge and continues to threaten the gains made. This helps to perpetuate a vicious cycle of homelessness, unemployment, and ill health as success in one is heavily dependent on the other.

Cost Savings Analysis

Program cost savings was calculated by subtracting treatment cost from the cost of incarceration at the Arapahoe County Jail for the ADMIT program. Total program cost savings over the period was \$510,904.80

Program Performance

The Modified Coping Self-Efficacy and Modified Self Efficacy and Mental Health Scales both showed large positive effect size ($d = 0.52$ $d = 0.83$, respectively) and were statistically significant. The Modified Rotter's Internal/External Locus of Control Scale, the Brief Symptom Inventory: Global Severity Index, the Brief Symptom Inventory: Positive Symptom Distress Index and the Brief Symptom Inventory: Positive Symptom Total all showed negative effect size ($d = -0.69$, $d = -0.61$, $d = -0.60$, and $d = -0.86$, respectively) and were statistically significant. Therefore, clients are improving in their perceived self-efficacy with regard to coping behaviors and their perceived self-efficacy with focus specifically on managing mental illness symptoms.
